## Vision and Mission of KLE Technological University

### **Vision**

KLE Technological University will be a national leader in Higher Education—recognised globally for innovative culture, outstanding student experience, research excellence and social impact.

### **Mission**

KLE Technological University is dedicated to teaching that meets highest standards of excellence, generation and application of new knowledge through research and creative endeavours.

The three-fold mission of the University is:

- To offer undergraduate and post-graduate programs with engaged and experiential learning environment enriched by high quality instruction that prepares students to succeed in their lives and professional careers.
- To enable and grow disciplinary and inter-disciplinary areas of research that build on present strengths and future opportunities aligning with areas of national strategic importance and priority.
- To actively engage in the Socio-economic development of the region by contributing our expertise, experience and leadership, to enhance competitiveness and quality of life.

As a unified community of faculty, staff and students, we work together with the spirit of collaboration and partnership to accomplish our mission.

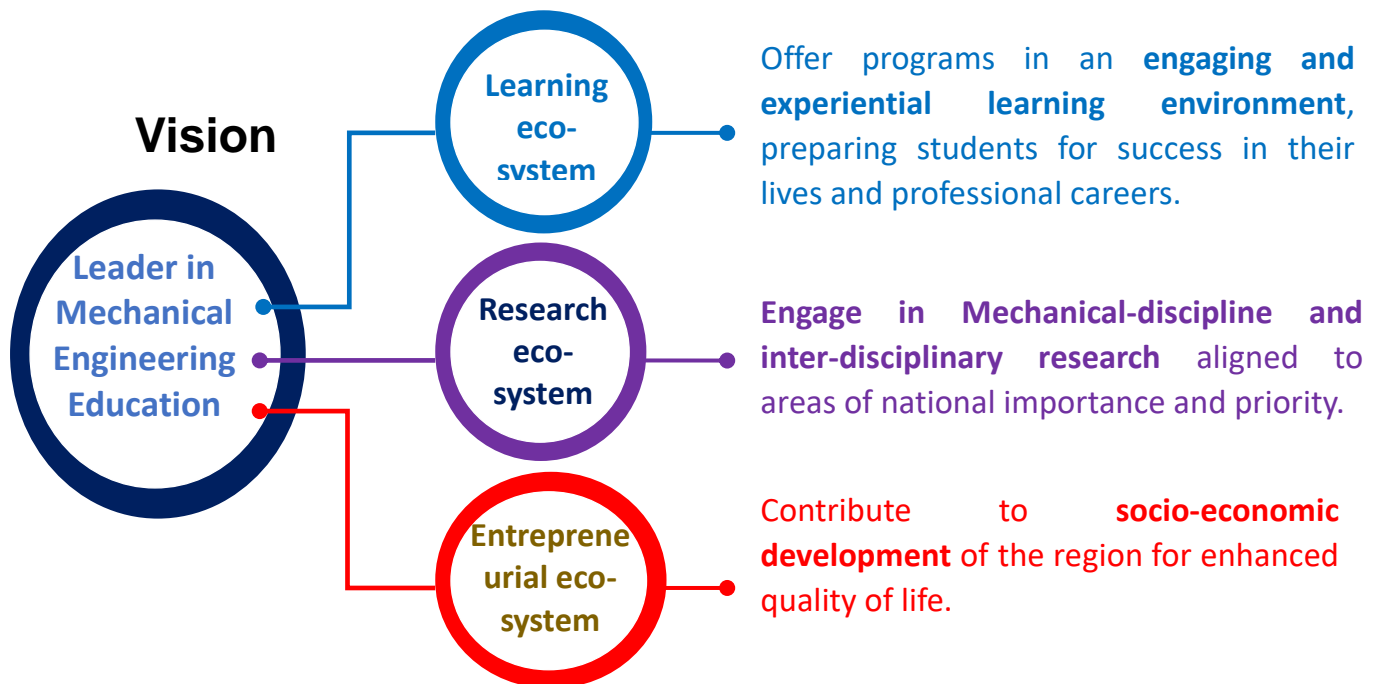

## Vision and Mission Statements of the School

### Vision

KLE Tech - School of Mechanical Engineering will be a national leader in mechanical engineering education - recognized for innovative culture, outstanding research and societal outreach.

### Mission

Program Educational Objectives/Program Outcomes and Program-Specific Objectives

<b>Program Educational Objectives -PEOs</b>
1. Graduates will demonstrate technical competence in design of products, processes and systems to address identified problems through focused research directed by guiding principles of technical documentation and evaluation with due consideration to sustainability principles incorporating modern computing tools.
2. Graduates will be competent as leaders committed to strive towards attainment of professional and organizational goals with due adherence to professional ethics team expectations and sensitivities of cultural diversity.
3. Graduates will practice of engineering profession in corporate and governmental settings to meet prevailing stake holder needs, thereby contributing to societal development.
4. Graduates will get updated to actively adopt new professional development through suitable application of domain knowledge and compete for new career openings evolving in the ever-changing global enterprises.
<b>Program Outcomes-POs</b>
1. An ability to independently carry out research /investigation and development work to solve practical problems
2. An ability to write and present a substantial technical report/document
3. Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program
4. Ability to plan and execute projects considering economical and financial factors
5. Ability to use and develop modern tools in modelling, simulation and analysis of manufacturing/ management related problems

### Curriculum Structure-Overall

		Semester 1 to 4 (2021-23)			Total Program Credits:88			
Course with course code	I		II		III		IV	
	PLM Fundamentals 20EAMC701		PLM Advanced 20EAMC705		Industrial Training/Mini Project 20EAMI801		Project Work Phase II 20EAMW802	
	Engineering Data Management 20EAMC702		Enterprise Resource Planning - II 20EAMC706		Project Work Phase I 20EAMW801			
	Product Design and Development 20EAMC703		Project Feasibility and Analysis 21EAMC701					
	Enterprise Resource Planning – I 20EAMC704		Research Methodology 20EAMC708					
	Programme Elective 1		Programme Elective 2					
	Collaborative Design-Modelling Lab 20EAMP701		PLM Advanced Lab 21EAMP701					
	PLM Functional Lab 20EAMP702		ERP Technical Lab 20EAMP705					
	ERP Functional Lab 20EAMP703		Product Automation Lab 20EAMP706					
			Mini Project 20EAMW701					
<b>Credits</b>	<b>25</b>		<b>25</b>		<b>18</b>		<b>20</b>	

## Curriculum Structure-Semester wise

[←back-1Semester](#)

<b>Program: PG_Advanced Manufacturing Systems</b>		<b>Semester: I</b>
<b>Course Title: PLM Fundamentals</b>		<b>Course Code:20EAMC701</b>
<b>L-T-P: 2-0-0</b>	<b>Credits:2</b>	<b>Contact Hours:2</b>
<b>ISA Marks: 50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 30</b>	<b>Examination Duration:3hrs</b>	
<p><b>1. The PLM Environment – 7 hrs</b>            PLM overview, Background for PLM, Scope, PLM grid, PLM paradigm – Concepts and consequences, Strategic benefits, Operational benefits, Spread of PLM, Overcoming problems, Enabling opportunities, Challenges, Issues in the traditional environment, Product data issues, A complex changing environment.</p>		
<p><b>2. PLM Basic Functionalities – 4 hrs</b>            Collaborations and approvals, Structure of PLM business process services, Workspace, Folders, Routes, Issue management, Document management, IP classification, Need for IP protection, Parts and libraries, BOM management.</p>		
<p><b>3. Organizational Change Management – 6 hrs</b>            Relevance of OCM in PLM, Benefits of OCM, Incremental and transformational change, Prerequisites for CM, The importance of OCM in the PLM Environment, Participants in change, Generic issues with change, OCM activities in the PLM environment, Pitfalls of organizational change.</p>		
<p><b>4. Project Management in PLM Environment – 6 hrs</b>            Characteristics of projects, People in projects, Project phases, Project management knowledge area, Project management tools and templates, The importance of project management in PLM, Project reality in a typical company, Project management activities in PLM Initiatives, Pitfalls of project management, Top management role with project management.</p>		
<p><b>5. PLM: A Key Enabler in Implementation of Industry 4.0 – 7 hrs</b>            Digital manufacturing, Industry 4.0 – A smart era, Action areas of Industry 4.0, PLM in Industry 4.0, Collaborations in Industry 4.0 via PLM, IP protection and BOM management in Industry 4.0 via PLM, Project and variant management in Industry 4.0 via PLM, Traceability requirements management in Industry 4.0 via PLM, Benefits of incorporating PLM in Industry 4.0, Challenges and future directions for PLM in Industry 4.0.</p>

<b>Course Title: Engineering Data Management</b>		<b>Course Code:20EAMC702</b>
<b>L-T-P: 4-0-0</b>	<b>Credits: 4</b>	<b>Contact Hours: 4</b>
<b>ISA Marks: 50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration:3hrs</b>	
<b>1. Introduction and Overview of Embedded Product Design - 5 hrs</b> Background, Related Research and Research Problems, Structure of the Report, Design for Manufacture, Design of Embedded Products, Technical Design Disciplines and Document Management, Software Design, Electronics Design, Software-Hardware Co-Design, Mechanical design, Concurrent Engineering, Design Data Management.		
<b>2. PDM Systems and Data Exchange- 5 hrs</b> Product Data Management (PDM), State-of-the-art trends of PDM, Data Formats and Translators in Data Exchange, STEP (Standard for the Exchange of Product Model Data), CDIF (Case Data Interchange Format), SGML (Standard Generalized Markup Language).		
<b>3. PDM and SCM- 10 hrs</b> PDM and the Product Life Cycle, PDM Systems – Common Functionality, Product Structure and Document Management, System Architecture, Version Management, Configuration Selection, Concurrent Development, Build Management, Release Management, Workspace Management, Change Management.		
<b>4. PDM and SCM Requirements of Design Data Management - 10 hrs</b> Requirements for the Embedded Product's Design Data Management, Data Management, Process and Life-Cycle Management, Data Capture & Distribution, Support for Working Methods, Requirements for Enterprise-Level Design Data Management, Design Data Management Levels, The Design Data Management Features of Design Tools , Team-Level Design Data Management, Team-Level Design Data Management.		
<b>5. Analysis of Needs and Solutions - 5 hrs</b> Comparison of Principles, Comparison of Key Functionalities, Requirements and Needs, Analysis, Different Scenarios in an Integrated Environment, Possible Integrations, Examples of integrations.		
<b>6. Product Data in PLM Environment- 5 hrs</b> Relevance of Product Data in PLM, Product Data Across the Lifecycle, Tools to Represent Product Data, Data model diagrams, Reality in a Typical Company-Issues, Challenges and Objectives, Product Data Activities in the PLM Initiative-Product Data Improvement.

<b>ISA Marks: 50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 hrs</b>	
<b>1. Introduction - 6 hrs</b> Characteristics of successful product development, duration and cost of product development, Challenges of product development.		
<b>2. Development Process and Organizations - 6 hrs</b> Generic development process, concept development – Front-end process, adapting the generic product development process.		
<b>3. Identifying Customer Needs - 6 hrs</b> Defining scope, gathering data from customers, establishing relative importance of needs etc.		
<b>4. Establishing Product Specifications - 4 hrs</b> Target specifications & refining specifications.		
<b>5. Concept Generation - 4 hrs</b> Five step methodology of concept generation.		
<b>6. Concept selection - 4 hrs</b> Structured methodology for selecting a concept using selection matrix & ranking of concepts.		
<b>7. Product Architecture - 2 hrs</b> Meaning & implication of product architecture.		
<b>8. Industrial Design - 4 hrs</b> Meaning of ID, & its impact, Aesthetic & Ergonomic considerations, ID process.		
<b>9. Design for Manufacturing - 2 hrs</b> DFM meaning, DFM Methodology.		
<b>10. Value Engineering and Product Design - 2 hrs</b> Definition of value, Value analysis job plan, creativity etc.

<b>Program: PG_Advanced Manufacturing Systems</b>		<b>Semester: I</b>
<b>Course Title: Enterprise Resource Planning – I</b>		<b>Course Code:20EAMC704</b>
<b>L-T-P: 3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3</b>
<b>ISA Marks: 50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 hrs</b>	
<p><b>1. Introduction to ERP – 10 hrs</b>            Need for ERP, Characteristics and components of ERP, Suppliers of ERP, Integrated Management Information, Seamless Integration and Functional information system, Marketing, Accounting and Financial Management, Supply Chain Management, Resource Management, Integrated Data Model Business Functions and Business Processes: Functional Areas of Operation, Business Processes, A process view of business, Functional Areas and Business process of very small business. Marketing and Sales, Supply Chain Management, Accounting and Finance, Human Resources, Functional Area Information System            Business Process Reengineering: Need for reengineering, Reengineering Model, BPR Guiding principles , Business process reengineering and performance improvement, Enablers of BPR in Manufacturing, Collaborative Manufacturing, Intelligent manufacturing, Production Planning. BPR Implementation</p>		
<p><b>2. ERP – A Manufacturing Perspective – 10 hrs</b>            Role of Enterprise Resource Planning (ERP) in manufacturing, Computer Aided Design/Computer Aided Manufacturing (CAD/CAM), Materials Requirement Planning (MRP)-Master Production Schedule (MPS);Bill of Material (BOM);Inventory Records; Closed Loop MRP; Manufacturing Resource Planning (MRP-II), Manufacturing and Production Planning Module of an ERP System , Distribution Requirements Planning (DRP), Just-in-Time(JIT) &amp; KANBAN - Kanban; Benefits of JIT; Potential Pitfalls of JIT; Kanban, Product Data Management (PDM)- Data Management, Process Management; functions of PDM; Benefits of PDM, Manufacturing Operations- Make-to-Order (MTO) and Make-to-Stock (MTS); Assemble-to-Order (ATO); Engineer-to-Order (ETO); Configure-to-Order (CTO)</p>		
<p><b>3. ERP modules structure – 20 hrs</b>            Financial &amp; Accounting Management: Differences between Financial accounting, Cost accounting and Management accounting, Basic finance – Concept of Cost Centre accounting, Cost – Volume – Profit Analysis, Cash Flow Analysis            Sales and Distribution Perspective: Features of purchase module, ERP Purchase System; Role of ERP in Sales and Distribution, Sub-Modules of the Sales and Distribution Module: Master data management, Order management, Warehouse management, Shipping and transportation, Billing and sales support, foreign trade, Integration of Sales and Distribution Module with Other Modules.            Inventory Management Perspective: ERP inventory management system, Importance of Web ERP in Inventory Management, ERP Inventory Management Module and Sub-Modules of the ERP Inventory Management Module, Bill of Material, Safety stock, Lot number/Batch number, Inventory valuation methods            CRM Perspective: Role of ERP in CRM, Concept of CRM: Objectives of CRM; Benefits of CRM; Components of CRM, Types of CRM: Operational CRM, Analytical CRM, Sales intelligence CRM, Collaborative CRM, Sub-Modules of CRM: Marketing module; Service module; Sales module            HR Perspective: Role of ERP in Human Resource Management: Workflow of ERP human resource management system; Advantages of ERP human resource management system, Human Resource Management Module: Functions of human resource management module; Features of human resource management module; Benefits of human resource management module</p>

<b>Program: PG_Advanced Manufacturing Systems</b>		<b>Semester: I</b>
<b>Course Title: PLM Functional Lab</b>		<b>Course Code:20EAMP702</b>
<b>L-T-P: 0-0-3</b>	<b>Credits: 3</b>	<b>Contact Hours: 06</b>
<b>ISA Marks: 80</b>	<b>ESA Marks:20</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 72</b>	<b>Examination Duration: 2 hrs</b>	
<p><b>1. Collaboration and Approvals – 15 hrs</b>            Illustrate the structure of PLM Business Process Services, Create and manage your folders, Create workflows, Identify and manage your assigned tasks, Subscribe to various objects and events, Report and resolve issues in objects, Create, track and organize your documents.</p>		
<p><b>2. IP Classification – 15 hrs</b>            Need for IP Classification, Create different types of libraries and their related hierarchies, Create and manage documents and parts, classify the library objects based on their features, Use the Classification functionality.</p>		
<p><b>3. Change Management – 15 hrs</b>            Initiate a change action, Add proposed changes to change action, Work under change actions to execute a design modification, View the realized changes, Review and approve the design changes.</p>		
<p><b>4. Project Management Fundamentals – 15 hrs</b>            Create programs and projects, Assign members to a project, Add tasks and assign project members to the tasks, Create folders for managing project documents, Create process flow for tasks, Review the status of programs and projects.</p>		
<p><b>5. Open Ended Experiments – 12 hrs</b>            Collaborations, IP Classification, Change management, Project management fundamentals</p>

<b>Program: PG_Advanced Manufacturing Systems</b>		<b>Semester: I</b>
<b>Course Title: Design for Additive Manufacturing</b>		<b>Course Code:20EAME701</b>
<b>L-T-P: 3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3</b>
<b>ISA Marks: 50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 hrs</b>	
<b>1. Overview of Design for Additive Manufacturing (AM)</b> How to design for AM? Challenges & opportunities, Design process, mechanical properties, performance of materials used in AM, process driven & designer driven shape, methods, Additive manufacturing principles & processes.		
<b>2. Drivers for AM</b> Material efficiency, flow optimization, integration of functions, mass customization, lead time, automated manufacturing, Limitations, Available material, accuracy of the technology, price of the industrial machines, certification of materials and processes, surface finish(supports, post processing), part dimensions.		
<b>3. DFMA Principles for AM</b> Maximum Part size, Faces requiring support, minimum wall thickness & rigidity, Minimum feature size & manufacturing quality, Typical geometries, DFX rules for additive manufacturing. Cost considerations.		
<b>4. Topology Optimization for AM</b> Introduction to topology optimization, Topology optimization process, characteristics, link with AM potentials & Challenges, Current developments.		
<b>5. Accuracy Issues in AM</b> Properties of metallic and nonmetallic additive manufactured surfaces, Stress induced in additive manufacturing (AM) processes. Surface roughness problem in rapid prototyping, Part deposition orientation and issues like accuracy, surface finish, build time, support structure, cost etc.

<b>Program: PG_Advanced Manufacturing Systems</b>		<b>Semester: I</b>
<b>Course Title: Industrial Robotics</b>		<b>Course Code:20EAME702</b>
<b>L-T-P: 3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3</b>
<b>ISA Marks: 50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 hrs</b>	
<b>1. Robot Fundamentals</b> History of robotics, Advantages & Applications of robots, Robot characteristics. Classification and structure of robotic systems, PTP and continuous path systems, JIRA and RIA, Robot components, Robot anatomy (configurations, Robot motions), Work volume, drive systems		
<b>2. Robot Kinematics</b> Matrix representation, Homogeneous transformation matrices, Representation of transformations, Inverse transformation matrices, forward and inverse kinematics of robots, D-H representation of forward kinematic equations, degeneracy and dexterity		
<b>3. Differential Motions and Velocities</b> Differential relationships, Jacobian, differential motions of a frame, calculation of Jacobian, inverse jacobian		
<b>4. Dynamic Analysis and Forces</b> Langrangian mechanics, Effective moments of inertia, Dynamic equations of multiple DOF robots, Static force analysis, Transformation of forces and moments between coordinate frames		
<b>5. Robot Control Systems</b> Components, Basic control system concepts and models, Controllers, control system analysis, robot actuation and feedback components Actuators and Sensors: Characteristics of actuating systems, different types of actuators, sensor characteristics, different types of sensors		
<b>6. Robot Programming</b> Methods (lead through, textual language), program as a path in space, speed control, motion interpolation, wait, signal and delay, branching, capability and limitations of lead through methods

<b>Program: PG_Advanced Manufacturing Systems</b>		<b>Semester: I</b>
<b>Course Title: Supply Chain Management</b>		<b>Course Code:20EAME703</b>
<b>L-T-P: 3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3</b>
<b>ISA Marks: 50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 hrs</b>	
<b>1. Supply Chain Concepts</b>		
Introduction to Supply Chain, SCOR model, Virtual/Extended Enterprise, Delivery Channel, Objective of a Supply Chain, Decision Phases in a Supply Chain, Production Approaches, Supply Chain Process, Push & Pull Production Systems, Push-Pull Boundary, Lack of Coordination and Bullwhip Effect, Order Management, Order-to-Cash Process, Procure-to-Pay Process, Call-off, Replenishment, Sourcing		
<b>2. Supply Chain Performance</b>		
Supply Chain Strategies, Value Chain, Capabilities, Uncertainties, Responsiveness vs Cost, Supply Chain Performance Drivers – Facilities, Inventory, Transportation, Information, Sourcing, and Pricing, Supply Chain Visibility, Resilience, Non-Financial Metrics Examples, Financial Metrics Examples, Sustainability		
<b>3. Designing Distribution Network</b>		
Introduction, Factors Influencing Distribution Network Design, Design Options for a Distribution Network, Distribution Network for Online Sales, Impact of Online Sales on Cost		
<b>4. Network Design</b>		
Introduction, Factors Influencing Network Design Decisions, Framework for Network Design Decisions, Facility Location Mathematical Models, Capacity Allocation Mathematical Models, Network Behavior, Types of Supply Relationship, Factors influencing Nature of Network Relationship, Vertical Integration		
<b>5. Demand Management and Forecast</b>		
House of SCM, Managing Demand, Managing Supply, Transportation Model, Just-in-Time in Supply Chain, Forecasting in Supply Chain, Characteristics of Forecasts, Approaches to Demand Forecasting		
<b>6. Inventory Management</b>		
Cycle Inventory, Cycle Inventory Related Costs, Economics of Scales, Economic Order Quantity, Multiechelon Cycle Inventory, Uncertainty and Safety Inventory, Safety Inventory Level		
<b>7. Logistic and Warehouse Management</b>		
Transportation in Supply Chain, Modes of Transportation, Transportation Network, Trade-offs in Transportation Design, Warehouse Layout and Design, Warehouse Types, Warehouse Operating Processes, Warehouse Management System, Procurement, Material Classification, Material Codification		
<b>8. Trends in SCM</b>		
Gartner’s Hype Cycle, Capgemini’s Consulting Hype Cycle, Trend Categories, Algorithmic Supply Chain Planning, Predictive Analytics, Global Logistics Visibility, Focus on Risk Management and Supply Chain Resiliency

<b>Program: PG_Advanced Manufacturing Systems</b>		<b>Semester: I</b>
<b>Course Title: Manufacturing Systems Simulation</b>		<b>Course Code:20EAME704</b>
<b>L-T-P: 3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3</b>
<b>ISA Marks: 50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 hrs</b>	
<b>1. Simulation Modeling and Analysis</b> Simulation Modeling and Analysis, Other types of simulation models, purpose of simulation, Advantages and Disadvantages of simulation, Limitations of simulation, Other considerations.		
<b>2. Principles of Modeling &amp; Simulation</b> Basic simulation modeling systems – discrete and continuous systems, general systems theory, models of systems- variety of modeling approach, Simulation as a decision making tool, Principle of computer modeling- Monte Carlo simulation, Nature of computer modeling.		
<b>3. Problem Formulation and Project Planning</b> Formal problem statement, Orientation, Project objectives, Decision making tools for determining project objectives. Simulation in project management, Simulation project managers function, Developing the simulation project plan, Compressing projects, Advanced project management concepts.		
<b>4. System Definition, Input Data Collection and Analysis</b> Systems classification, High level flow chart basics, Components and events to model, Data to be included in the model, Output data. Sources of input data, Collecting input data, Deterministic versus Probabilistic data, Discrete vs. Continuous data, Common input data distributions, Analyzing input data.		
<b>5. Model Translation, Verification and Analysis</b> Simulation program selection, Model translation section, Program organization, Divide-and-Conquer approach, Advancing the simulation clock event by event, Need for validation, Two types of validation, Validation data analysis process.		
<b>6. Simulation Application Areas</b> Manufacturing and material handling system, Automobile industry, Logistics and transportation systems, Health care, Service systems, Military.

<b>Program: PG_Advanced Manufacturing Systems</b>		<b>Semester: II</b>
<b>Course Title: PLM Advanced</b>		<b>Course Code:20EAMC705</b>
<b>L-T-P: 2-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 2</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 30</b>	<b>Examination Duration: 3 hrs</b>	
<b>1. PLM Systems – 6 hrs</b> System Architecture, Information Models and Product Structures, Reasons for Deployment of PLM Systems, Use of PLM Systems in Different Organizational Verticals, Integration of the PLM System with other Applications.		
<b>2. Deployment of the PLM System – 6 hrs</b> Different stages of deployment, Leading a PLM Project, Understanding the need for change, PLM maturity model, Choosing a system, Realization stage of the project, Start up, Steering group, Project manager, Accomplishing change in the organization.		
<b>3. Business benefits of a PLM System – 6 hrs</b> Factors leading to PLM, Benefits of PLM in product lifecycle management, Measuring the business benefits in daily operations, PLM and data warehousing as a tool to support decision-making, Analyzing the cost of acquisition and the deployment of a PLM system, PLM software licenses, Database licenses, Hardware acquisition, Maintenance.		
<b>4. Challenges of Product Management in Manufacturing and Service Industries – 8 hrs</b> Life cycle thinking, Value added services and after sales traceability, Special challenges of product management in the high-tech industry, Case studies. Categorizing services, PLM in service business, PLM challenges in service business, Case studies.		
<b>5. Understanding the product Lifecycle – 4 hrs</b> The basic behavior of products and lifecycles, Using metrics to steer your business performance in various phases of the product lifecycle, Other aspects of product lifecycle, Building a product business case, Case studies.

<b>Program: PG_Advanced Manufacturing Systems</b>		<b>Semester: II</b>
<b>Course Title: Enterprise Resource Planning-II</b>		<b>Course Code:20EAMC706</b>
<b>L-T-P: 3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 hrs</b>	
<p>1. ERP implementation Basics – 4 hrs</p> <p>Master Data Management – Item Master, Vendor Master, COA, Customer Master, Machine Master, etc. Vendors- Role of Vendor; Consultants: Types of consultants; Role of a Consultant, Employees; Role of employees; Resistance by employees; Dealing with employee resistance, Role of Top Management, Role of Implementation Partner</p>		
<p>2. ERP implementation Life cycle – 10 hrs</p> <p>Objectives of ERP implementation, Different phases of ERP implementation. Consultants, vendor and employees; <i>ERP Projects</i>: Project types, Implementation methodology, Project Preparation, Business Blueprinting, Gap Analysis, Realization, Final Preparation, Go Live and Support, User Training; <i>ERP Post Implementation</i>: Maintenance of ERP- Organizational and Industrial impact; Success and Failure factors and ERP Implementation; Difference between Implementation, Upgrade &amp; Re-implementation; Configuration vs Customization in ERP project</p>		
<p>3. ERP and e-Business – 6 hrs</p> <p>Introduction ERP and e-business process model, components of e-Business supply chain ERP/ e-business integration ERP to ERP II –Bringing ERP to the Entire Enterprise</p>		
<p>4. Future Directions in ERP – 6 hrs</p> <p>Faster Implementation Methodologies; Business Modules and BAPIs; Convergence on Windows NT; Application Platform; New Business Segments; More Features; Web Enabling; Market Snapshot.</p>		
<p>5. Other Related Technologies of SCM – 6 hrs</p> <p>Relation to ERP; E-Procurement; E-Logistics; Internet Auctions; E-markets; Electronic Business Process Optimization; Business Objects in SCM; E commerce</p>		
<p><b>6. Case Studies– 8 hrs</b></p> <p>ERP case studies in HRM, Finance, Production, Product Database, Materials, Sales &amp; Distribution</p>

<b>Course Title: Project Feasibility and Analysis</b>		<b>Course Code:21EAMC701</b>
<b>L-T-P: 3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 hrs</b>	
<b>1. Planning overview – 7 hrs</b> Capital investments, Types of capital investments, Phases of capital budgeting, Levels of decision-making, Facets of project analysis, Key issues in major investment decisions, Objectives of capital budgeting, Common weaknesses in capital budgeting.		
<b>2. Generation and Screening of Project Ideas – 7 hrs</b> Concept of strategy, Portfolio strategy, Business level strategies, Strategic planning and capital budgeting, Generation of ideas, Corporate appraisal, Tools for Identifying Investment opportunities. Scouting project ideas, Preliminary screening.		
<b>3. Market and Demand Analysis– 6 hrs</b> Situational analysis, Specification of objective, Portfolio management techniques, Conduct of market survey, Characteristics of market, SWOT analysis, Demand forecasting, Uncertainties in demand forecast, Marketing plan.		
<b>4. Technical Analysis– 7 hrs</b> Manufacturing process/technology, Material inputs and utilities, Product mix and Plant capacity, Location and site, Machineries and equipment, Structures and civil works, Environmental aspects, Project charts and layouts.		
<b>5. Financial Estimates and Projections – 7 hrs</b> Means of finance, Estimates of sales and production, Cost of production, Working capital requirement and its financing, Profitability projections, Projected cash flow statements, projected balance sheet.		
<b>6. The Impact of Sustainability on Project Management – 6 hrs</b> The concept of sustainability, Sustainability in project management, Inter-relating life cycles, The impact of sustainability on project management processes, Measuring and reporting projects, The impact of sustainability on project management competencies.

<b>Program: PG_Advanced Manufacturing Systems</b>		<b>Semester: II</b>
<b>Course Title: Additive Manufacturing</b>		<b>Course Code:20EAME705</b>
<b>L-T-P: 3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 hrs</b>	
<b>1. Additive Manufacturing (AM) Overview</b>		
Introduction to reverse engineering Traditional manufacturing vs AM, Computer aided design (CAD) and manufacturing (CAM) vs AM, Different AM processes and relevant process physics, AM process chain Application level: Direct processes – Rapid-Prototyping, Rapid Tooling. Rapid Manufacturing; Indirect Processes - Indirect Prototyping. Indirect Tooling, Indirect Manufacturing		
<b>2. Materials Science of AM</b>		
Discussion on different materials used, Use of multiple materials, multifunctional and graded materials in AM, Role of solidification rate, Evolution of non-equilibrium structure, Structure property relationship, Grain structure and microstructure		
<b>3. AM Technologies</b>		
Powder-based AM processes involving sintering and melting (selective laser sintering, shaping, electron beam melting. involvement). Printing processes (droplet based 3D Solid-based AM processes - extrusion based fused deposition modeling object Stereo-lithography Micro- and nano-additive.		
<b>4. Mathematical Models for AM</b>		
Transport phenomena models: temperature, fluid flow and composition, buoyancy driven tension driven free surface flow pool) Case studies: Numerical Modeling of AM process, Powder bed melting based process, Droplet based printing process Residual stress, part fabrication time, cost, optimal orientation and optimal Defect in AM and role of transport Simulations (choice of parameter, Mo del validation for different		
<b>5. Process selection, planning, control for AM</b>		
Selection of AM technologies using decision methods. Additive manufacturing process plan: strategies and post processing. Monitoring and control of defects, transformation.

<b>Program: PG_Advanced Manufacturing Systems</b>		<b>Semester: II</b>
<b>Course Title: Manufacturing Systems &amp; Automation</b>		<b>Course Code:20EAME706</b>
<b>L-T-P: 3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 hrs</b>	
<b>1. Introduction</b> Production system facilities, Manufacturing support systems, Automation in production system, Automation principles and strategies, Manufacturing operations, Basic elements of an automated system, Advanced automation functions, Levels of automation.		
<b>2. Material handling and identification technology</b> Considerations in material handling system design, 10 principles of material handling, Automated guided vehicle systems, Conveyor systems, Analysis of material transport system, Automated storage systems, Engineering analysis of storage system. Components of manufacturing systems, Single station automated cells, Applications and analysis of single station cells.		
<b>3. Flexible manufacturing systems</b> FMS components, FMS application and benefits, Quantitative analysis of flexible manufacturing systems.		
<b>4. Industrial control systems</b> Sensors, Actuators, Drives and other control system components. Electro-hydraulic and Electro-pneumatics in manufacturing automations		
<b>5. Machine vision systems</b> Importance of machine vision system in manufacturing automation.		
<b>6. Role of microcontrollers in manufacturing automation system</b> Microcontroller architecture, interfacing sensors and actuators with microcontroller for industrial automation, Microcontroller programming.		
<b>7. PLCs in manufacturing automation</b> Application of programmable logic controllers in manufacturing automation, PLC basic and advanced ladder logic programming using RsLogix and CoDeSys format, Usage of timers, counters, sequencing, and interlocking, latching, master control relay for developing programs for manufacturing automation. Temperature control, valve sequencing, conveyor belt control, control of a process etc		
<b>8. SCADA for Automation</b> Elements of SCADA, Benefits of SCADA, Applications, Types of SCADA systems, Features and functions of SCADA, Building applications using SCADA for manufacturing automation.

<b>Program: PG_Advanced Manufacturing Systems</b>		<b>Semester: II</b>
<b>Course Title: Manufacturing Execution Systems</b>		<b>Course Code:20EAME707</b>
<b>L-T-P: 3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 hrs</b>	
<b>1. Enterprise and Enterprise Integration</b> Enterprise and its characteristics, Strategic Planning, Feedback Loops, Time Definitions, Business Processes, Manufacturing Processes, Enterprise Integration, Horizontal Integration and Interoperability, Vertical Integration and Temporal Gap, Digitalization, Standards (ISO 15704)		
<b>2. Manufacturing Execution Systems and its Functionalities</b> Manufacturing Execution Systems (MES), MES Functionalities, MES Models, Manufacturing Operations Management (MOM), Functional Control Model, MES in Discrete Industry, MES in Process Industry, Standards (IEC 62264, IEC 61512, VDI 5600)		
<b>3. Process and Data Modeling</b> Enterprise Modeling, Process Modeling, Business Process Modeling Language (BPMN), Sankey Diagram, Entity-Relationship Diagrams, ARIS (ARchitecture for integrated Information Systems), Integrated Definition for Function Modelling (IDEF), Event-Driven Process Chain (EPC), Data Modeling, Data Flow Diagrams (DFDs), Unified Modeling Language (UML), Business to Manufacturing Markup Language (B2MML)		
<b>4. Data Collection</b> Process Analysis, Process Modeling, Data Modeling, Data Flow Diagrams (DFDs), Communication Patterns, Technologies, OPC (OLE for Process Control)		
<b>5. Traceability And Tracking</b> Tracing, Traceability, Enterprise Entities, Forward and Backward Traceability, Traceability Granularity, Tracking, Tracking Approaches, Regulations (GMP, US FDA, EudraLex)		
<b>6. Performance Measurement</b> Performance Measurement, Performance Management, Performance Measurement System and Characteristics, Key Performance Indicators (KPIs), Overall Equipment Effectiveness (OEE), Metrics Maturity Model, KPI Effectiveness, Process Improvement, Standards (ISO 22400, VDMA 66412)		
<b>7. Managerial Accounting</b> Managerial Accounting, Cost Assignment Techniques, Cost Hierarchal Levels, Activity Drivers, Standard Cost, Actual Cost, Job Costing, Process Costing, Activity-Based Costing (ABC), Time-Driven ABC (TDABC), Resource Consumption Accounting (RCA), Cost of Poor Quality (COPQ)		
<b>8. Real-Time Enterprise</b> Real-Time Enterprise (RTE), Event-Driven Architecture (EDA), Events, Complex Event Processing (CEP)		
<b>9. Industry 4.0</b> Industry 4.0, Challenges, Industrial Internet of Things (IIoT), Reference Architecture for Industry 4.0, Cyber-Physical Systems (CPS), Cyber-Physical Production Systems (CPPS), Smart Product, Smart Manufacturing, Smart Logistics, Smart Services		
<b>10. Business Analytics and Business Intelligence, Blockchain</b> Knowledge Management, Case-Based Reasoning (CBR), Big Data, Decision Analytics, Descriptive Analytics, Predictive Analytics, Prescriptive Analytics, Bitcoin and Blockchain, Merkle Tree, Blockchain Types, Scope and Application of Blockchain in Manufacturing

Program: Advanced Manufacturing Systems		Semester: II
<b>Course Title: Robust Design Optimization</b>		<b>Course Code:20EAME708</b>
L-T-P: 3-0-0	<b>Credits: 3</b>	<b>Contact Hours: 3</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 hrs</b>	
<p>1. Robust Design Overview Taguchi's approach to quality and quality loss function, noise factors and average quality loss, exploiting non linearity, classification of parameters</p>		
<p>2. Analysis of variance No-Way ANOVA, One-Way ANOVA, Two-Way ANOVA and Three-Way ANOVA</p>		
<p>3. Two Level Experiments Two factor factorial design, model adequacy checking and estimating model parameters, <math>2^2</math> full factorial design, <math>2^3</math> full factorial design, <math>2^k</math> full factorial design and Two level fractional factorial design, General <math>2^{k-p}</math> fractional factorial design.</p>		
<p>4. Steps in Robust Design Identification of process and its main function, Noise factors and testing conditions, Control factors and their levels, Matrix experiment and data analysis plan, Conducting the experiment and data analysis, Verifying experiment and future plan.</p>		
<p>5. Signal to Noise Ratios Comparison of the quality of two process conditions, Relationship between Signal to Noise Ratio and quality loss after adjustment, Identification of a scaling factor, Signal to Noise Ratios for static problems, Signal to Noise Ratios for dynamic problems, Analysis of ordered categorical data.</p>		
<p>6. Taguchi Inner and Outer arrays Orthogonal arrays and fractional factorial designs, Parameter design and tolerance design, Analysis of inner/outer array experiment, Alternative inner/outer orthogonal array experiments.</p>		
<p><b>7. Constructing Orthogonal Arrays</b> Dummy level technique, Compound factor method, Linear graphs and Interaction assignment, Modification of linear graphs, Column merging method, Branching design.</p>
